

## V-BELT SPRAY

### Features:

It reduces the creakiness and dislocation of V-belt to minimum, and makes it flexible and extends its life. It increases the efficiency and traction force and provides the protection, while protecting the belts and bobbins against corrosion.

### Operation Range:

It is used in all motor and fan belts, which are made of PVC, gum-elastics and leather, and which run in flat and circular.

### Application:

The information are recommendations based on our experience. Without pretest and improper use, no liability for any damages. Strongly shake the box before using. Shake the box before use! Apply it in an even way, and wait for its processing. Repeat the application arbitrarily. Turn off the machines before use.
