

CONTACT SPRAY (non-oil)

Features:

The contact spray is an all-purpose spray among the organic solvents based on mineral oil. It is used for cleaning the electronic cards and sockets. It prevents leaked electricity and power loss. It purifies the contacts, fuses, cable connections etc. from oxidation and sulfur layers. It enables that the electric current occurs smoothly and it has remover effect.

Operation Range:

Used in all industrial sectors for the purpose of cleanliness and maintenance of electricity and electronics.

Application:

Thoroughly shake the box, spray the product to the closed circuit from a 25 cm distance in dirty surfaces such as electronic card, socket, and distributor cap and wait until it affects.
